***Allowable Subject Matter***

1. Claims 1-2, 4-5, 7-12, 14-22 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 12, Kawano et al. (5,774,797) discloses a transceiver having a memory for storing values for controlling a power amplifier, a temperature sensor for sensing a temperature, a gate voltage setting table for setting gate voltage with respect to the changing temperature, and a controller for maintaining constant for the power amplifier as the temperature change (figs. 3-6, 12-15, column 12 lines 1-40).

Davis et al. (5,994,965) discloses a method for controlling a power amplifier as a temperature change, comprising" a digital controller for controlling a temperature sensor, a gate voltage monitor controlled by a digital controller (200) (which is considered as a digital potentiometer by the examiner) for monitoring and supplying the gate voltage range based on the temperature change, and a drain voltage monitor (a current sensor) for monitoring and supplying voltage (figs.3, 7-8, column 12 line 39 to column 13 line 43).

These references do not specifically disclose the digital potentiometer and the drain current coupled to each of a plurality of amplifiers in a MMIC to maintain gain for each amplifier as the temperature change.

Regarding claims 2, 4-5, 7-11, 14-22, these claims are allowed as being dependent upon independent claims that have been allowed.

***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
